

SPECOPS SECURE SERVICE DESK

Datasheet

ABOUT SPECOPS Specops Software is the leading provider of password management and authentication solutions. Specops protects your business data by blocking weak passwords and securing user authentication. Every day thousands of organizations use Specops Software to protect business data. For more information, please visit specopssoft.com

SPECOPS SECURE SERVICE DESK

Employee password resets continue to drive a big volume of service desk tickets. Aside from draining IT resources, they also introduce a security vulnerability to your organization. Can your service desk verify that a user is really who they say they are before handing over a new password to an attacker posing as one of your users?

User verification at the service desk often relies on knowledge-based questions using static identity information from Active Directory or Entra ID, leaving it vulnerable to targeted attacks such as employee ID exploitation.

Specops Secure Service Desk increases security with stronger authentication methods that minimize the risk for user impersonation. Identity verification options range from mobile or email verification codes, to commercial authentication providers such as Duo Security, Okta, Symantec VIP, PingID and YubiKey. These authentication options are paired with technical enforcement of the ID verification, blocking agents from proceeding with the caller's request until authentication through the platform is completed.

48% of organizations do not enforce user verification for calls to the service desk

Feature Highlights

FEATURES	OTHER SOLUTIONS	SPECOPS SECURE SERVICE DESK
OOTB 3 rd party identify services e.g. Duo Security, Okta, Symantec VIP, PingID	Some support but lacking	Yes, plus several other ID options to support non-mobile users
Service desk interface for user verification	Yes	Yes (plus secure logins for service desk agents)
Service desk assisted password resets	No	Yes (and can force users to change password at next login)
User verification enforcement (agent cannot proceed without first verifying)	No (agent not forced to authenticate identity before proceeding to help caller)	Yes

FEATURES	OTHER SOLUTIONS	SPECOPS SECURE SERVICE DESK
User verification tracking	Yes (but detail is lacking)	Yes (details who was verified, for what use case, and by whom)
API for user verification	Some	Yes (allows user verification with 3 rd party systems with any of the 15+ enrolled ID services)

The 2023 MGM ransomware attack, which cost the company over \$100 million, was a result of missing ID verification at the service desk.

[Read more](#) about this attack.

How does it work?

Specops Secure Service Desk is natively integrated with Active Directory and Entra ID. Configuration of the system is done using Group or Cloud Policy, without introducing added complexity to your environment. Privacy is assured as your users' enrollment is encrypted and not stored as a whole in any single location, minimizing security risk while ensuring inherent real-time provisioning.

1. User forgets their password and calls the service desk for a new password.

2. Before the service desk agent can reset the password, they must verify the identity of the user using Secure Service Desk.

3. The service desk agent sends a secret one-time code to the mobile device associated with the user's Active Directory or Entra ID account. Only the user can see the secret one-time code.

4. The user receives the code, and relays it to the service desk agent.

5. The service desk agent enters the one-time code in Secure Service Desk and is now able to reset the user's password.

What does it look like?

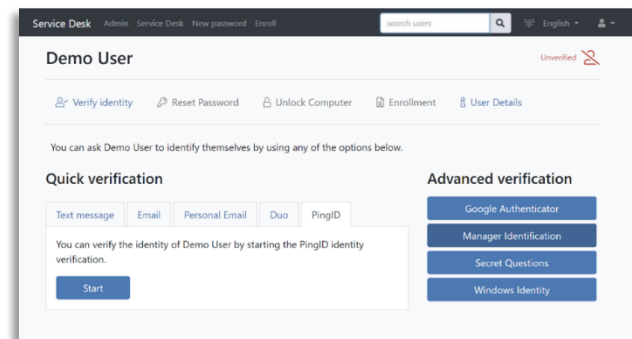

The solution interface allows service desk agents to view user details and perform the following actions:

1. Manage user enrollments
2. Reset Active Directory / Entra ID passwords
3. Recovery encryption keys for lockouts triggered by BitLocker or Symantec Endpoint Encryption (not available for Secure Service Desk for Cloud)

Service desk agent view

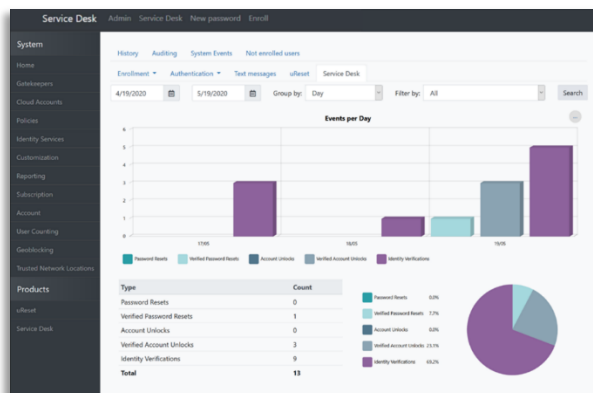

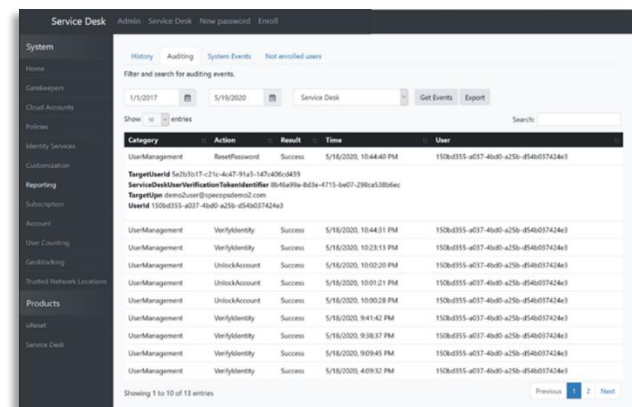

The above actions can be secured by enabling user verification enforcement.

When this feature is turned on, the agent will need to successfully verify the user's identity before being able to complete any of these high-risk actions.

Admin reporting view

User verification can be tracked within the solution via detailed audit logs.

The solution also provides a reporting dashboard that reflects verification data across multiple uses cases. This data can also be exported to JSON or XSLX for further processing.

What people are saying

Delivers on its promise

“Specops Secure Service Desk delivers on its promise. It helps organizations enforce secure user verification through stronger authentication methods.”

- [Techgenix review](#) by Nuno Mota, Microsoft Exchange, MVP

Exponentially more difficult for an attacker

“It provides the means for service desk technicians to effectively verify the identity of a supposed end user who requests a password reset. This should make it exponentially more difficult for an attacker looking to perform a social engineering or other type of attack to steal credentials.”

- [4sysops review](#) by Brandon Lee, Senior Editor at Virtualizationhowto.com
