

# SPECOPS PASSWORD AUDITOR

## Datasheet

---

**ABOUT SPECOPS** Specops Software is the leading provider of password management and authentication solutions. Specops protects your business data by blocking weak passwords and securing user authentication. Every day thousands of organizations use Specops Software to protect business data. For more information, please visit [specopssoft.com](http://specopssoft.com)

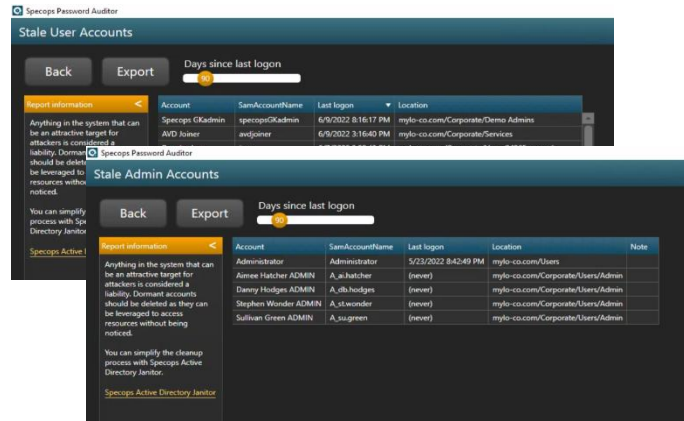

With [Specops Password Policy](#), you can continuously block the use of these and more than 3 billion more.

## Reduce risk by identifying stale admin and user accounts

Dormant accounts with or without admin privileges can pose a great security risk as they can be leveraged to access sensitive resources without being detected.

Keeping Active Directory free of inactive accounts is a best practice.

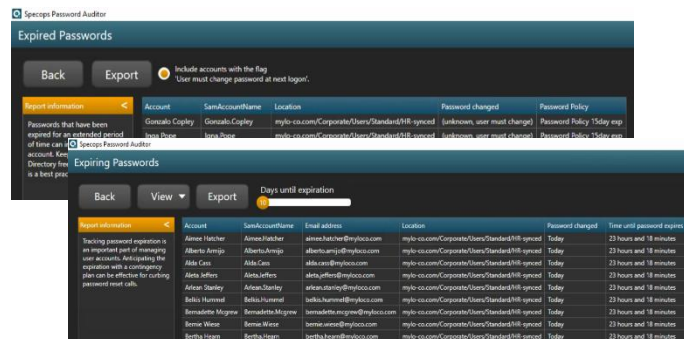

Specops Password Auditor provides a full view of admin accounts in an organization's domain, including stale admin accounts.

## Curb password reset calls with password expiration reports

Specops Password Auditor can detect expired and expiring passwords in Active Directory.

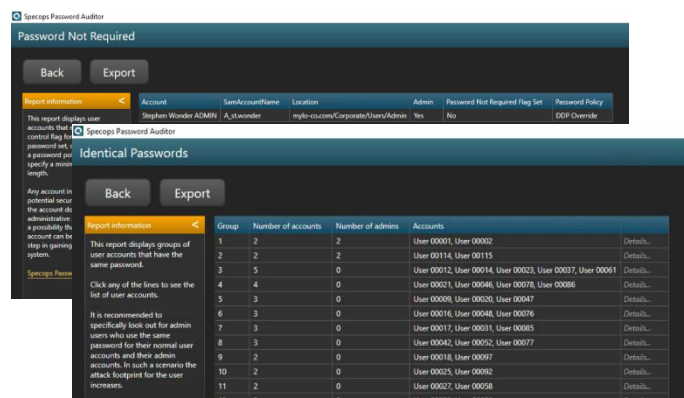

These reports enable IT teams to create a contingency plan to reduce password and lockout calls to the helpdesk as well as help avoid the cached credential problem for remote users.

## And more

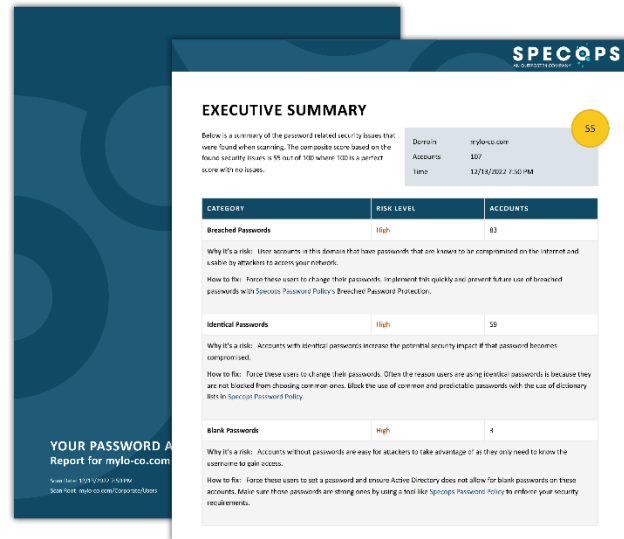

Specops Password Auditor contains several more reports that can help an IT department better audit and manage password security for their organization's Active Directory.

Find accounts with identical passwords, passwords not required, blank passwords, and more. Optionally anonymous user data mode to review and share results with enhanced privacy.

## Find your password vulnerability score and communicate the problem to decision makers

Share a summary of your results with people in your organization who do not have admin rights or have less technical knowledge with the Executive Summary PDF export. The report includes an overall vulnerability score, what was scanned and when as well as a summary table including explanations for “why it’s a risk” and “how to fix it” for each individual report.

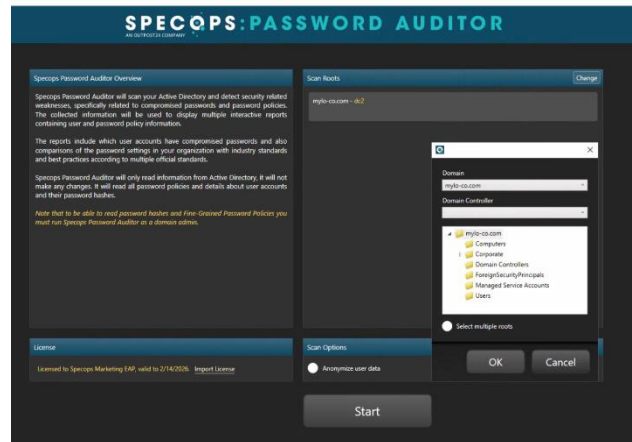

Easily share an overview of your results with the Executive Summary PDF export

## How does it work?

Specops Password Auditor scans your Active Directory to detect password security weaknesses. The results are displayed in multiple interactive reports containing user and password policy information. The reports include a summary of accounts using compromised passwords, comparisons of password policies in your organization against compliance standards, and more.

Specops Password Auditor will only read information from Active Directory; it will not make any changes. It will read the Default Domain Password Policy, any Fine-Grained Password Policies, as well as any Specops Password Policies (if installed).

Choose to scan a particular root or multiple trusted domains or OUs at once, as well as elect to anonymize user data in results

## Run your free Specops Password Auditor scan today

It takes a single compromised password to create risk and potential compromise. Download your free copy of Specops Password Auditor [here](#).

"A must for any network admin"  
"Easily see if we are in compliance."
