

# Specops Verified ID

## High-Assurance Identity Verification for Password Setup, Reset, and Recovery Workflows

Specops Verified ID enables high-assurance identity verification using government-issued identity documents and biometric liveness detection, powered by AI and machine learning algorithms. Users verify their identity by scanning an official ID and completing a live biometric check through the Specops:ID mobile app (available free for iOS & Android).

Verified attributes such as name and date of birth are then validated against the user's record in Active Directory, ensuring the person requesting access is the legitimate account holder.

### Core Use Cases

Identity-based attacks are increasingly targeting service desks and recovery workflows. It's vital you can reliably verify your end users while setting passwords and during recovery events. Use cases include any scenario where high assurance and phishing-resistant identity proofing are key, such as:

- **Service desk verification**
- **Self-service password resets**
- **First day password set-ups**

**Specops Verified ID is available as an add-on to Specops Secure Service Desk and Specops uReset, enabling advanced identity verification within password reset and service desk workflows.**

## Capabilities for High-Assurance Identity Verification

**Government-Issued ID Verification:** Validates users using trusted identity documents such as passports, driver's licenses, and national ID cards, leveraging AI and machine learning algorithms. These documents include standardized security features designed to prevent forgery.

**Biometric Liveness Detection:** Real-time AI-driven biometric analysis confirms the person presenting the document is physically present, preventing spoofing attempts using photos, videos, or masks.

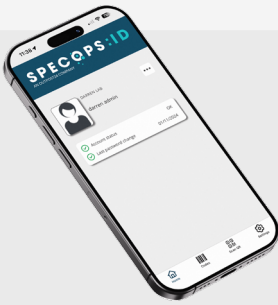

**Directory Attribute Validation:** Verified identity attributes are automatically validated against user records in Active Directory.

**Global Document Support:** Support for 16,000+ government-issued identity documents across 254 countries and territories.

**All AI and machine learning algorithms are pre-trained and operate without using or retaining customer data for training purposes.**

# How Specops Verified ID Works

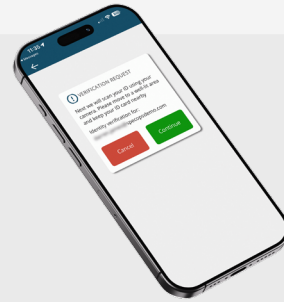

1

## User Prompted to Verify

A user attempts to self-reset a password or has called the service desk. They're prompted to verify their identity through the Specops:ID mobile app.

2

## Document Verification

The user scans a government-issued identity document, such as a passport, driver's license, or national ID card.

3

## Biometric Liveness Validation

Real-time biometric checks confirm the person presenting the document is physically present.

4

## Verification Passes

Verified identity attributes (such as name and date of birth) are validated against records in Active Directory.

## Stronger Protection Against Identity-Based Attacks

Specops Verified ID helps prevent common identity-based attacks targeting service desk and password reset workflows.

### Protected against the following attacks?

Verification Method	Protected against the following attacks?			
	Social Engineering	SIM-Swapping	Insider Threats	Phishing
Specops Verified ID	✓	✓	✓	✓
Callback Verification	✗	✗	✗	✗
Email Verification	✗	✓	✗	✗
SMS Verification	✗	✓	✗	✗

## Key Benefits

Compared to traditional verification tools, Specops Verified ID delivers stronger protection without adding operational complexity.

	Value Added
<b>Simple Integration</b>	<ul style="list-style-type: none"><li>• Easily fits into Specops Secure Service Desk and Specops uReset workflows</li><li>• Added via a simple configuration</li><li>• No stressful install or deployment required</li><li>• No user enrollment required for onboarding via our First Day Password feature</li></ul>
<b>Operational Efficiency</b>	<ul style="list-style-type: none"><li>• Reduce service desk handling time</li><li>• Automate verification workflows</li><li>• Reduce agent time spent on verification processes</li><li>• Easier onboarding of new staff</li></ul>
<b>Improved Security</b>	<ul style="list-style-type: none"><li>• Prevent service desk impersonation attacks</li><li>• Reduce account takeover risk</li><li>• Enable phishing-resistant identity verification</li><li>• More secure onboarding of new staff</li></ul>
<b>Improved User Experience</b>	<ul style="list-style-type: none"><li>• Simple app-based verification via Specops:ID</li><li>• Fast and intuitive process</li></ul>
